### Installation Summary

For easy installation use the software, available at [www.seagate.com/support](http://www.seagate.com/support). Back up your critical data before making changes. Serial ATA controllers and system BIOS may have different setup choices. See your controller or system documentation for BIOS options and any custom device drivers.

1. Mount the drive using two screws per side. Do not over tighten the screws.
2. Attach the cables. The data interface and power cables are keyed.
3. Run your computer BIOS/system setup program. Enable the new drive and set the options.
4. Prepare the drive for use with your Operating System. See your OS Help instructions for details. Be careful to select the correct drive. Windows Vista or XP prepares the drive during installation. If this is a second drive, then Windows Disk Management can be used to prepare the drive. Use the DiscWizard software to copy data from an old drive to a new drive. Go to [www.seagate.com/support](http://www.seagate.com/support) and select installation for additional instructions and illustrations. Macintosh uses Disk Utility in the Utilities folder.
